SUMMARY

Data Analyst with expertise in Python, SQL, Power BI, and data visualization, transforming raw data into actionable business insights. Skilled in data cleaning, ETL, EDA, data modeling, KPI reporting, and dashboard development to deliver accurate and meaningful analysis.

SKILLS

Programming & Querying: SQL, Python, Pandas, NumPy

Visualization & BI Tools: Power BI, MS Excel, Matplotlib, Seaborn

PROJECTS

Customer Behavior Data Analysis | Python, SQL, Power BI Link

- **End-to-End Analytics Pipeline:** Built a full-stack retail analytics solution across **Python, PostgreSQL, and Power BI** to evaluate 3,900 consumer transactional records and optimize marketing strategy.
- **Data Cleaning & Feature Engineering:** Imputed missing data via category-level medians, standardized schemas to snake_case, and engineered quantitative age groups and purchase frequency features using Pandas.
- **Advanced SQL Querying:** Designed CTEs, subqueries, and ROW_NUMBER() window functions in PostgreSQL to analyze customer loyalty tiers, product rankings, and discount reliance.
- **Interactive Dashboarding:** Created a Power BI executive dashboard with dynamic DAX KPI cards and cross-filtering slicers, identifying a conversion segment of **2,500+ repeat non-subscriber buyers**.

Meta Ad Performance Dashboard | Power BI, DAX Link

- **Built a Power BI dashboard** to track Facebook and Instagram ad performance, covering 123.8K impressions, 14.7K clicks, and $2.5M total budget.
- **Created a star-schema** data model in Power BI linking ads, campaigns, users, and events tables, along with a calendar table for time-based analysis.
- Used **DAX** to build a dynamic measure selector, letting users switch between metrics (Impressions, Clicks, Purchases, etc.) across all charts from one dropdown.

E-Commerce Sales & Delivery Analysis | SQL (Google BigQuery) Link

- **Analyzed** 100K+ e-commerce orders across 8 linked tables (customers, orders, payments, products) **using SQL joins and CTEs** to find sales trends and customer buying patterns.
- **Calculated** year-over-year revenue growth, average order value, and freight costs by state to understand which regions drive the most business.
- **Compared** actual vs. estimated delivery dates to find the fastest and slowest delivery states, helping spot delivery and logistics issues.

CERTIFICATIONS

- **IBM Exploratory Data Analytics Certificate – Coursera (2025):** Completed 8 practical case studies involving SQL, data cleaning, dashboards, and presentations.
- **Google Foundations: Data, Data, Everywhere Certificate – Coursera (2025):** Conducted an analytical thinking self-assessment and demonstrated its application through real-world examples.

EDUCATION

LJ University, Ahmedabad Expected 2027

B.E. Computer Engineering And Applications | Current SPI: 7.56
